

Finite-precision toy memory: first-failure curves

- FP32 state
- Uniform 4
- Uniform 8
- Uniform 16
- Full residual 4+4
- Full residual 4+FP32
- Fixed low rank 4+8
- Untransported 4+4
- Stochastic 4 (v2)

$N = 512$ independent sequences per condition
 Curves are empirical; later recovery is not survival.
 All 25 arms per condition remain in the CSV data.
 Stochastic results use the corrected v2 seed key.
